

# Financial Instruments with Characteristics of Equity

Webinar 4: Classification of compound instruments and redemption obligation arrangements

July 2018

# Before we start

---

- You can download the slides by clicking on the button below the slides window
- This webinar is a recording (it is not live), so we are unable to take any questions
- The views expressed are those of the presenters, not necessarily those of the International Accounting Standards Board (the Board) or IFRS Foundation

# Financial Instruments with Characteristics of Equity

## – Webinar Schedule

### Previous Webinars

Overview of the Discussion Paper

The Board's preferred approach and classification of non-derivative financial instruments

Classification of derivatives on own equity

### This Webinar

**Classification of compound instruments and redemption obligation arrangements**

### Future webinars

Presentation of equity instruments applying the Board's preferred approach

Presentation of financial liabilities applying the Board's preferred approach

# Interaction between Section 4 and Section 5 of the Discussion Paper

## Section 4 classification of derivatives on own equity

- All standalone derivatives on own equity
- All embedded derivatives on own equity that are separated
- **EXCEPT** those that may require extinguishment of own equity instruments

## Section 5 compound instruments and redemption obligation arrangements

- All compound instruments
- All derivatives that may require extinguishment of own equity instruments

Once a non-derivative liability host is identified any resulting own equity derivatives are classified using Section 4 of the Discussion Paper.

# Derivatives that may require extinguishment of own equity instruments

- For example, consider a forward contract to purchase 100 own shares in one year's time for a payment of CU100.

- In effect, the derivative has changed the characteristics of the outstanding 100 shares to an unavoidable obligation to pay a fixed amount of cash.
- The obligation to pay CU100 has both the timing and amount features of a financial liability.

# Compound instruments and redemption obligation arrangements

Bond = liability component

Conversion option = equity component

## Compound instruments:

contain both a liability and an equity component.

For example, a share conversion option that has the features of equity and is embedded in a bond.

## Redemption obligation arrangement

Written put option on own shares = redemption obligation

Own shares

## Redemption obligation arrangements:

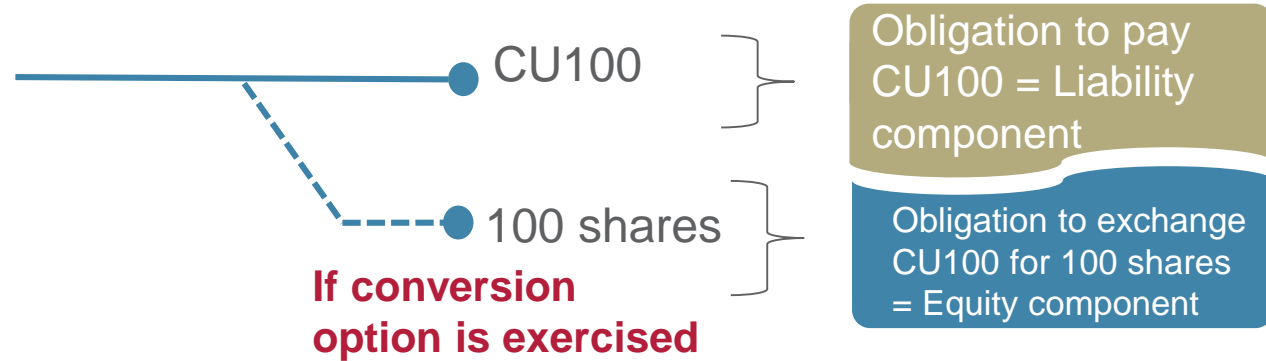

derivatives that require extinguishment of own equity instruments considered in conjunction with the underlying equity instrument to be extinguished.

For example, a written put option on own shares.

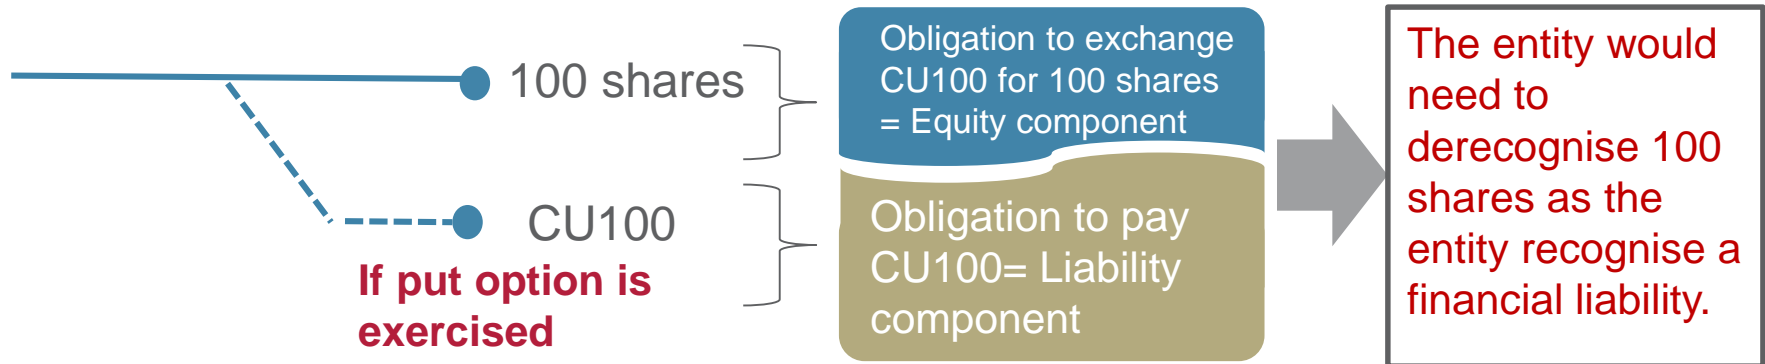

Ultimate outcome is either own shares outstanding or payment of cash – and the entity cannot control the outcome

# Convertible bonds and written put options

Convertible bond  
—at maturity, the holder has a choice to either receive CU100 in cash or convert the bond to 100 shares

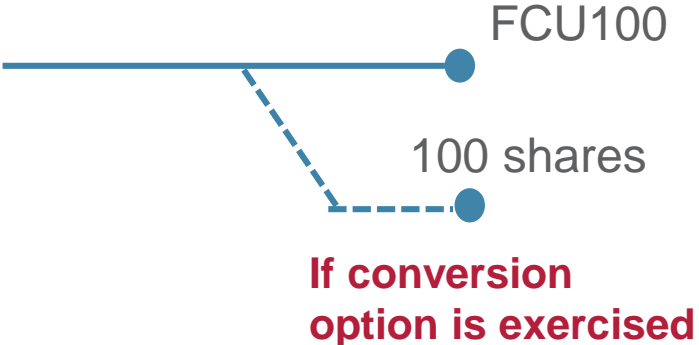

A written put option on own shares and own shares  
— at maturity of written put the holder has a choice to either keep 100 shares or to exercise the put to receive CU100 in cash and return the shares

# Foreign currency convertible bonds and written put options with foreign currency strike price

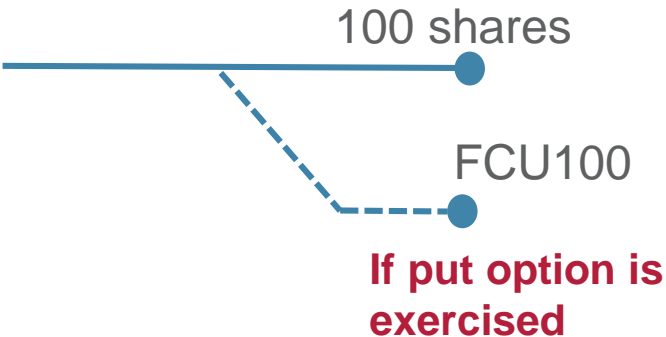

Convertible bond

Obligation to pay FCU100 = Liability component

Obligation to exchange FCU100 for 100 shares = Derivative liability

A written put option on own shares and own shares

Obligation to exchange FCU100 for 100 shares = Derivative liability

Obligation to deliver FCU100 = Liability component

# Written puts on non-controlling interests

## Questions applying IAS 32

Why gross up?

How to reclassify equity for NCI put: derecognise non-controlling interest, or recognise contra-equity account?

How to account for subsequent changes in fair value puts?

## The Board's preferred approach

Consistent classification of rights and obligations regardless of structure

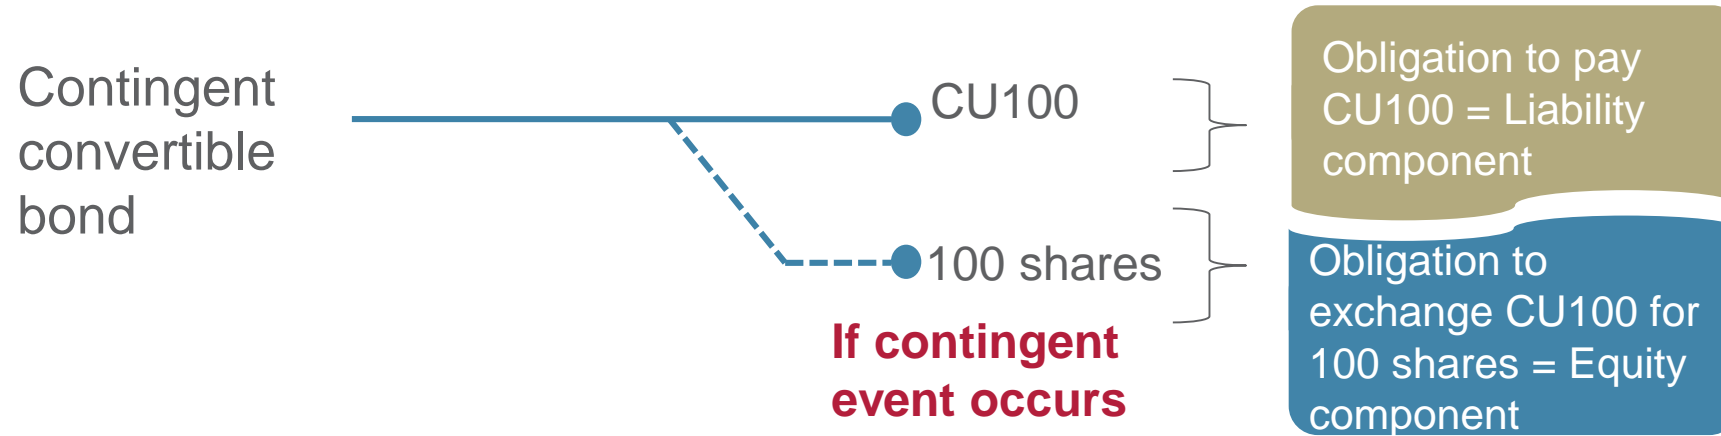

For NCI puts, this means:

- Recognise a liability for the present value of the redemption amount
- Derecognise underlying NCI shares
- Classify remaining rights and obligations using derivative principle

Liability is subject to remeasurement per IFRS 9 (including effect of strike price at fair value)

Separate presentation of income and expense, if strike price = fair value of own shares

# What about contingent convertible bonds?

- The potential settlement outcomes are the same as a convertible bond or a written put on own shares (ie either deliver a fixed number of shares or a fixed amount of cash).
- Classification would be consistent for all financial instruments with the same rights and obligations in which the entity (the issuer) does not control the settlement outcome. For example, a contingency based on the level of (regulatory) capital is considered to be outside the entity's control.
- Consistent classification of equity component with standalone options to issue equity.
- Like IAS 32, classification considers contractual terms of financial instruments, eg laws and regulations are not considered to be part of the contract.

# What if *the entity* has a right to choose the settlement outcome?

Reverse convertible bond  
—at maturity, the **entity** has the right to choose to deliver either CU100 or 100 shares

- The reverse convertible bond does not contain a financial liability component, *unless* the bond establishes an obligation that has the feature(s) of a financial liability indirectly (see Section 8 of the DP).
- Applying the Board’s preferred approach, the entity would classify the bond as an equity instrument in its entirety.
- The Board considered but did not reach a preliminary view, about whether and if so, how the information about the entity’s right to choose to deliver cash should be provided in the financial statements.

# Map of derivatives-IAS 32 vs the Board's preferred approach (no independent variables)

12

Contract types and settlement types	IAS 32	The Board's preferred approach
<b>Written put option on own equity (receive own equity and deliver cash, if the holder exercises)</b>		
Net-cash settlement	Financial asset/liability	Financial asset/liability
Net-share settlement	Financial asset/liability	<b>Gross up: recognise a financial liability for the present value of the redemption amount, derecognise equity at the current fair value and recognise the residual (representing a written call option) in equity</b>
Gross physical settlement	Gross up: a financial liability for the present value of the redemption amount and reclassify from equity	Gross up: recognise a financial liability for the redemption amount, <b>derecognise equity at the current fair value and recognise the residual (representing a written call option) in equity</b>

# Map of derivatives-IAS 32 vs the Board's preferred approach (no independent variables)

Contract types and settlement types	IAS 32	The Board's preferred approach
<b>Forward to buy own equity (receive own equity and deliver cash)</b>		
Net-cash settlement	Financial asset/liability	Financial asset/liability
Net-share settlement	Financial asset/liability	<b>Gross up: a financial liability for the present value of the redemption amount and derecognise equity at the current fair value</b>
Gross physical settlement	Gross up: a financial liability for the present value of the redemption amount and reclassify from equity	Gross up: a financial liability for the present value of the redemption amount <b>and derecognise equity at the current fair value</b>
