This document is provided as a convenience to observers at the Analyst Representative Group meeting, to assist them in following the discussions. It does not represent an official position of the IASB. Board positions are set out in Standards.

Note: These notes are based on the staff papers prepared for the ARG meeting. Paragraph numbers correspond to paragraph numbers used in the ARG agenda paper.

INFORMATION FOR OBSERVERS

ARG Meeting: February 2009, London

Project: Extracts from the Invensys plc Annual Report 2008

(Agenda paper 2A)

Objective

1. The following employee benefit disclosures are provided to stimulate discussion on the questions set out in the Appendix A of agenda paper 2.

Background

- These disclosures are extracted from the Invensys plc Annual Report for the year ended 31 March 2008. (The full annual report is available at http://www.invensys.com/isys/docs/reports/2008/Invensys_AR_2008.pdf or by contacting staff.)
- 3. Paragraph references to the disclosures required by IAS 19 are highlighted (eg 120A.a).
- 4. Disclosures not **specifically** required (NSR) by IAS 19 have a text box, shaded background and a note in the top left hand side of box (eg Additional disclosures).

NOTES TO THE FINANCIAL STATEMENTS

Accounting Policies

120A.a)

• • •

Pension costs and other post-retirement benefits

For defined benefit plans, the service cost of providing retirement benefits to employees during the year is charged to operating profit or loss in the year. The cost of providing benefits under the defined benefit plans is determined separately for each plan using the projected unit credit actuarial valuation method. The full cost of providing amendments to benefits in respect of past service is also charged to operating profit or loss in the year. The expected return on the assets of the schemes during the year based on the market value of scheme assets at the start of the financial year is included within other finance charges - IAS 19. This also includes a charge representing the expected increase in liabilities of the schemes during the year, arising from the liabilities of the scheme being one year closer to payment. Differences between actual and expected returns on assets during the year are recognised in the statement of recognised income and expense in the year, together with differences from changes in assumptions. The net surplus or deficit on defined benefit pension schemes is reported on the balance sheet within the pension asset or liability.

For defined contribution schemes the amount charged to the income statement in respect of pension costs is the contributions payable in the year. Differences between contributions payable in the year and contributions actually paid are shown either as accruals or prepayments in the balance sheet.

...

25 Pensions and post-retirement benefits

(i) Defined contribution schemes

The Group operates many defined contribution schemes. Pension costs in respect of defined contribution schemes represented contributions payable in the year and amounted to £11 million (2007: £8 million). At 31 March 2008, there were £1 million (2007: £1 million) of outstanding contributions included in payables.

120A.b)

46

(ii) Defined benefit schemes - general

The Group operates many funded and unfunded defined benefit pension and post-retirement schemes. Contributions to the defined benefit schemes are made in accordance with the recommendations of the independent actuary of the relevant scheme. There are two main funded defined benefit schemes in the UK and US, together with other smaller schemes in the rest of the world.

The principal Group scheme covering the majority of UK employees is the Invensys Pension Scheme. The Invensys Pension Scheme is a funded defined benefit scheme. The assets of this scheme are held separately from those of the Group. These assets are managed by trustees, who are required to act in the best interests of the schemes' beneficiaries. The Trustee Board is made up of nine directors, four nominated by the Company and five by the members. The Company is responsible for appointing the Chairman from the Board. The last full actuarial valuation of the Scheme for funding purposes was carried out with a valuation date of 30 September 2005 by independent actuaries using the projected unit credit method for valuing the liabilities. The assumptions that had the most effect on the results of this valuation for funding purposes are those relating to the discount rate and inflation on scheme liabilities and mortality assumptions.

There are numerous schemes operated by overseas subsidiaries. Of these the largest US scheme is assessed annually by an actuary, and the other overseas defined benefit schemes are normally assessed periodically by independent actuaries in accordance with local practice.

The Group also operates a number of non-pension post-retirement benefit plans, the majority of which relate to the provision of medical benefits to retired former employees of the Group's subsidiaries in the US. These schemes are generally unfunded.

The last full valuations of all schemes on an IAS 19 basis have been updated to 31 March 2008 to reflect market conditions and material events in the plans.

Not Specifically Required

(iii) Defined benefit schemes - major assumptions

120A.n)

The major assumptions made when valuing the liabilities of funded and unfunded schemes under IAS 19 are as follows:

For March 2008 the major financial assumptions were:

| | | Funded schemes | | | chemes |
|--|---|---------------------------------------|------------|------------------------|---------------------------|
| | Invensys Pension Scheme (UK) % | Invensys Pension Plan (US) % | Other % | US healthcare¹ % | Other % |
| Major assumptions | | | | | |
| Rates of increase in salaries | 4.95 | 4.00 | 3.81 | - | 1.48 |
| Rate of increase to pensions in payment ² | 3.80 | - | 2.78 | - | 1.11 NSR |
| Discount rate for scheme liabilities | 6.10 | 6.55 | 6.07 | 6.55 | 5.93 <mark>120A.n)</mark> |
| Inflation rate | 3.70 | 2.50 | 3.10 | - | 2.17 NSR |

| For March 2007 the major financial assumptions were: | | | | | 120An) | |
|--|---|---------------------------------------|------------|------------------------|------------------------|--|
| | | Funded schemes | | Unfunded schemes | | |
| | Invensys Pension Scheme (UK) % | Invensys Pension Plan (US) % | Other % | US healthcare¹ % | Other % | |
| Major assumptions | | | | | | |
| Rates of increase in salaries | 4.45 | 4.00 | 3.91 | - | 1.44 | |
| Rate of increase to pensions in payment ² NSR unless principal assumption | 3.50 | - | 2.41 | - | 0.94 | |
| Discount rate for scheme liabilities | 5.35 | 5.95 | 5.30 | 5.95 | 5.36 _{120A.r} | |
| Inflation rate NSR unless principal assumptions | 3.20 | 2.50 | 2.74 | - | 2.10 | |

| For March 2006 the major financial assumptions were: | | | Not S _I | ecifically Required | (Comparatives) | |
|--|---|---------------------------------------|--------------------|------------------------|----------------|--|
| | | Funded schemes | | Unfunded schemes | | |
| | Invensys Pension Scheme (UK) % | Invensys Pension Plan (US) % | Other % | US healthcare¹ % | Other % | |
| Major assumptions | | | | | | |
| Rates of increase in salaries | 4.15 | 4.00 | 3.63 | - | 2.47 | |
| Rate of increase to pensions in payment ² | 3.35 | - | 1.91 | - | 1.68 | |
| Discount rate for scheme liabilities | 4.95 | 6.05 | 5.11 | 6.05 | 4.76 | |
| Inflation rate | 2.90 | 2.50 | 2.26 | - | 2.16 | |

The assumptions used for medical trend rates for beneficiaries of the US healthcare scheme were 9.5% per annum, declining to an ultimate rate of 5.0% in 2008 (2007 and 2006: 9.0% declining to 5.0%).

² The inflationary pension increases granted for the UK scheme in the year were 3.70% (2007: 3.20%; 2006: 2.90%).

120A.n)

25 Pensions and post-retirement benefits (continued)

(iii) Defined benefit schemes - major assumptions (continued)

Not specifically required unless principal assumptions

The demographic assumptions which were consistently applied for the main schemes are as follows:

Invensys Pension Scheme (UK)

Standard actuarial mortality tables PA92 were adopted using year of birth and medium cohort projections. Probability of death at each age was multiplied by 126%.

By way of illustration the impact of the application of these mortality tables on the expected longevity of pensioners is shown below:

| Retiring today at age 65: | Male | 20.2 |
|---------------------------------|--------|------|
| | Female | 23.0 |
| Retiring in 20 years at age 65: | Male | 21.4 |
| | Female | 24.1 |

Invensys Pension Plan (US)

The mortality table adopted was the RP 2000 Table for combined employee/annuitants, projected to 2008 using projection scale AA.

Sensitivities

| A 1% movement in the assumed rate of increase in US healthcare costs would have the following effects: US healthcare scheme defined benefit obligation: increase/(decrease) | Increase £m 0.97 | Decrease £m (0.88) |
|--|------------------------|--------------------------|
| US healthcare scheme | | 120A. o) |
| Invensys Pension Scheme (UK) defined benefit obligation: (increase) | | (62) |
| Applying a 1% underpin to the improvement in mortality implicit in the PA92 tables would have the following effect: | | £m |
| Invensys Pension Scheme (UK) defined benefit obligation: (increase) | | (144) |
| A 1 year extension to the pensioners lives would have the following effect: | | £m |
| Invensys Pension Scheme (UK) defined benefit obligation: decrease/(increase) | 54 | (54) |
| A 0.1% movement in the assumed discount rate would have the following effect: | 0.1% increase £m | 0.1% decrease £m |
| Invensys Pension Scheme (UK) defined benefit obligation: (increase)/decrease | (35) | 35 |
| A 0.1% movement in the assumed inflation rate would have the following effect: | 0.1% increase £m | 0.1% decrease £m |
| schemes. The principal sensitivities are illustrated below: | lities of all define | a benefit |

Liabilities for each scheme are determined using the projected unit credit actuarial valuation method. This is an accrued benefits valuation method that discounts the best estimate of future cash flows and makes allowance for projected earnings.

If the UK Pension Scheme were to be wound up, the relevant employers would be responsible, under section 75 of the Pensions Act 1995 to fund the UK Pension Scheme up to the levels of the cost of buying out the benefits for all scheme members with an insurer. This cost would be considerably more than the value placed on the ongoing liabilities for accounting purposes. The deficit in the UK Pension Scheme calculated on a winding up basis was approximately £1.8 billion as at 30 September 2005, the date of the last actuarial valuation. This will be reviewed and updated at the next valuation.

120A.l)

31 March 2008 are:

The expected return on each asset class has been determined on the basis of market expectations for the rate of return on each asset class over the life of the related obligation, at the balance sheet date. In respect of the UK Pension Scheme, Government and Corporate Bond indices have been used to set the expected rate of return on bonds subject to an adjustment for the risk of default, and a risk premium has been applied to determine the expected long-term rate of return on equity investments. Similar processes are applied to other schemes.

The Trustee of the UK Pension Scheme adopted a new statement of investment principles which resulted in a change in the investment strategy of the scheme in the prior year. The Trustees target a long-term rate of return on investments as a whole, at 1% per annum over Government stock of appropriate duration to the scheme's liabilities. This investment strategy gives an overall expected rate of return of 5.42% per annum (2007: 5.50%) at the balance sheet date based on market conditions at this date.

Cumulative actuarial gains and losses

The cumulative amount of actuarial gains and losses recognised since 1 April 2004 in the Consolidated statement of recognised income and expense is a gain of £24 million (2007: loss of £194 million).

120A.i)

25 Pensions and post-retirement benefits (continued)

(ix) Pensions and post-retirement benefits - other

Total pension service costs charged to the income statement in respect of defined benefit and defined contribution schemes amounted to £38 million (2007: £40 million).

s follows: 120A.q)

The estimated levels of contributions expected to be paid to defined benefit schemes in the year to 31 March 2009 are as follows:

| | Funded schemes | Unfunded schemes | | | | | |
|--|--|------------------|------------------------|-------------|-------------|--|--|
| Invensys Pension Scheme (UK) £m | Invensys Pension Plan (US) £m | Other £m | US healthcare £m | Other £m | Total £m | | |
| 28 | 8 | 5 | 3 | 8 | 52 | | |

Regarding rates of contributions for future years, following the triennial valuation of the UK Pension Scheme (valuation date 30 September 2005) contributions to the UK Pension Scheme will be made at the rate of 16.3% of pensionable salaries up to the date of the next triennial valuation. In addition, the Company will continue to make annual supplemental contributions to the scheme. These will amount to £28 million in the year ending 31 March 2009, £37 million in the year ending 31 March 2010 and increase by £1 million per annum thereafter until 31 March 2015. Where the proceeds from the sale of a business exceed £1 million, at least 8% of the proceeds net of tax and costs will be paid as additional contributions to the UK Pension Scheme. The funding plan is subject to revision after the next triennial valuation which will have a reference date of 31 March 2008. Under the US plan, the Company's agreement with the Pension Benefit Guaranty Corporation provided for additional contributions of 4% of net proceeds from future disposals.

The following graph shows a projection of the benefit payments from the UK Pension Scheme based on the assumptions underlying the IAS 19 assessment of obligations at 31 March 2008:
