Appendix G: (1) Extract of R.E.A. Holdings PLC 2009 Annual Report (listed on the main market of the London Stock Exchange)

Sustainable practices

In developing its mining activities, the group remains committed to observing international standards of best environmental practice. Steps are being taken to establish health and safety procedures to protect and safeguard the welfare of all persons involved with the mining operations, to ensure the proper management of waste water and to provide for the reinstatement, in so far as reasonably practicable, of land areas affected by mining to their original condition upon completion of mining operations.

Finances

Accounting policies

The group continues to report in accordance with International Financial Reporting Standards ("IFRS") and to present its financial statements in US dollars. The company continues to prepare its individual financial statements in sterling and in accordance with UK Generally Accepted Accounting Practice; accordingly the company's individual financial statements are presented separately from the consolidated financial statements.

The accounting policies applied under IFRS are set out in the "Accounting policies (group)" section of this annual report. The accounting policy relating to biological assets (comprising oil palm plantings and nurseries) is of particular importance. Such assets are not depreciated but are instead restated at fair value at each reporting date and the movement on valuation over the reporting period, after adjustment for additions and disposals, is taken to income. Deferred tax is provided or credited as appropriate in respect of each such movement.

As in previous years, the fair value of the biological assets at 31 December 2009 has been derived by the directors on a discounted cash flow basis by reference to the FFB

expected to be harvested from the group's oil palms over the full remaining productive lives of the palms and to an estimated profit margin per tonne of FFB so harvested. This estimated unit profit margin is based on current costs and an estimated produce value for transfer to mill derived from a 20 year average of historic CPO prices but is buffered to restrict any implied change in margin in contradiction of the trend in current margins. The 20 year average CPO price, FOB port of Samarinda and net of Indonesian export duty, to 31 December 2009 amounted to \$446 per tonne which is higher than the 20 year average to 31 December 2008 of \$431 per tonne. However, because of inflation, the unit profit margin per tonne of FFB harvested implied by the average price of \$446 and the current unit cost of production would be lower than the unit profit margin assumed at 31 December 2008 although the unit profit margin that is currently being achieved is, in reality, greater than that margin. Accordingly, the same unit profit margin as that assumed as at 31 December 2008 (namely \$50 per tonne of FFB) has been applied in valuing the biological assets as at 31 December 2009.

The discount rates used for the purposes of the biological asset revaluation at 31 December 2009 were 16 per cent in the case of REA Kaltim and 19 per cent in the case of all other group companies (31 December 2008: respectively, 16 per cent and 19 per cent). The directors believe that the risks of successfully harvesting FFB projected to be produced from newly developed areas are significantly greater than those of harvesting the projected FFB crops from established estates. They consider it appropriate to reflect this risk differential by applying a discount rate of 19 per cent to newly established areas, reducing this to 17.5 per cent as an area becomes well established and then further to 16 per cent when plantings in an established area become predominantly mature. The discount rates used at 31 December 2009 and 31 December 2008 were derived accordingly.

Appendix G: (1) Extract of R.E.A. Holdings PLC 2009 Annual Report (listed on the main market of the London Stock Exchange)

The directors recognise that the IFRS accounting policy in relation to biological assets does have theoretical merits in charging each year to income a proper measure of capital consumed (so that, for example, a fair distinction is drawn each year between the cost of the shortening life expectancy of younger plantings still capable of many years of cropping and that of older plantings nearing the end of their productive lives). It does, nevertheless, concern the directors that no estimate of fair value can ever be completely accurate (particularly in a business in which selling prices and costs are subject to very material fluctuations). Moreover, in the case of the group's biological assets, small differences in valuation assumptions can have a quite disproportionate effect on results. The biological assets are recorded in the group balance sheet at 31 December 2009 at \$204 million. An increase or reduction of \$5 per tonne in the estimated profit margin used for the purpose of the valuation of \$50 per tonne of FFB would increase or reduce the valuation by approximately \$22 million.

Sales of coal made during 2009 were minimal and the gross assets of the group's coal operations at 31 December 2009 represented only some 3 per cent of the group's gross assets. Accordingly, no separate segmental report in respect of the coal operations has been provided in the notes to the consolidated financial statements.

Group results

Group operating profit for 2009 amounted to \$47.7 million and profit before tax to \$41.7 million against the comparable figures of the preceding year of \$40.6 million and \$36.3 million.

With increased sales volumes and despite lower selling prices, revenue for 2009 at \$78.9 million was only marginally below that of 2008 (\$79.6 million). The increased volumes coupled with inflation did, however, mean, that cost of sales for 2009 at \$34.0 million was

higher than the comparable figure for 2008 of \$27.7 million. Other significant movements in the components of operating profit between 2008 and 2009 comprised a positive swing in the aggregate JFRS fair value adjustments of \$18.2 million (reflecting gains of \$11.3 million in 2009 against losses of \$6.9 million in 2008) and an increase in administrative expenses (\$7.2 million in 2009 against \$3.5 million in 2008).

The 2009 gains on IFRS fair value adjustments comprised a gain of \$1.5 million on the revaluation of agricultural produce inventory and a gain of \$9.8 million on the revaluation of biological assets (2008: losses of, respectively, \$4.2 million and \$2.7 million). The gain on revaluation of agricultural produce inventory reflected a higher CPO price at 31 December 2009 than at 31 December 2008 partly offset by a reduction in inventory volumes, while the gain on revaluation of biological assets resulted mainly from the reinstatement of the group's extension planting programme and the resultant increase in planted hectarage during 2009.

An apparently marked increase in administrative expenses from \$3.5 million in 2008 to \$7.2 million in 2009 was almost entirely accounted for by a reduction from 2008 to 2009 in net exchange gains of \$2.1 million, a swing of \$1.0 million on movements on accruals in respect of the company's prospective liability for employer national insurance contributions on exercise of a director's option (which reflected movements in the market price of the company's ordinary shares) and a swing of \$0.8 million on movements in the accrued liability for pension funding which was adjusted during 2009 to reflect the latest triennial actuarial valuation of the group's pension scheme.

Group profit before tax for 2009 amounted to \$41.7 million against \$36.3 million in 2008. The increase was substantially in line with the increase in operating profit but did reflect higher finance costs (\$6.8 million against

Source: Oil World

Demand for vegetable oils in the coming season is expected to as fertilizers, agrochemicals and fuel. The profit for the year after increase both in the food and non-food sectors, supported by tax was US\$ 141.1 million including the impact of biological economic recovery. There is always the risk that collateral factors. ranging from weather to currency, will add to price volatility. To mitigate pricing volatility the Company's pricing and risk management policy outlines key guidelines on - a) Forward Pricing, b) Pricing Instruments and c) Counterparty exposure. The objective is to use forward sales to fix sale prices so as to reduce the potential for fluctuating operating profits. Forward sales are invaluable in a market which corrects sharply. As at 31st December 2009, forward sales of approximately 37 % of the Group's estimated production for 2010 had been made. This Group is in a strong financial position with cash holdings at the strategy is crucial for sustained long term growth.

FINANCIAL OVERVIEW

The company posted a strong result despite volatile trading conditions. Compared to 2008 the Group's revenue fell 8% to US\$ 323 million and our profit before tax, excluding the accounting effect of biological assets under IAS41, was US\$ 85.3 million or US\$ 200.1 including the accounting effect of biological assets under IAS41. This result is due primarily to the fall in average commodity prices compared to 2008, as can be seen from the above table.

However the profits were supported by a 14% increase in production of crude oils and a reduction in costs of inputs such

assets, compared to US\$ 22.2 million the previous year. Including the effect of biological asset accounting, these results reflect the lower CPO prices seen in the first half of 2009, whilst prices made a strong recovery in the second half of 2009 the average achieved price for the Group was US\$ 710 per tonne compared to US\$ 926 achieved in 2008.

Earnings per share decreased from 51.7 cents in 2008 to 41.8 cents excluding the effects of gains from biological assets. The end of 2009 of US\$ 13.4 million with a further US\$ 64.5 million in debtors most of which is for oil sales and has subsequently been received, while borrowings have decreased from US\$ 58.4 million in 2008 to US\$ 56.8 million. In 2009 two dividends were paid, totalling 28 US cents.

Freight rates from PNG to North-West Europe, which had been very high in 2008, averaging US\$ 110 per tonne, fell to US\$ 99 per tonne in 2009.

The Group's average selling price for 2009 for crude palm oil was US\$ 710 per tonne, this compares to the average CIF Rotterdam price for the year of US\$ 683, the difference reflecting forward sales made at higher prices. The average selling price achieved in 2008 was US\$ 926.

In Indonesia, average palm-oil prices for 2009 were at the historically-high level of US\$680 per tonne (Rotterdam cif) although this was 28% lower than 2008's US\$941, which reflected the exceptionally robust levels achieved in that year. F.f.b. crops were 10% higher on the established Sumatran estates and the first crops from the new Bangka project were harvested and sold during the year. As a result of the above, a gross profit of US\$13,143,000 was achieved, only 12% lower than last year's US\$14,893,000.

In Australia, lower throughput of cattle, downward pressure on valuations of the cattle at the year-end, disappointing crops and lower world grain prices resulted in a loss of US\$1,315,000, compared with the loss of US\$975,000 for 2008.

As a result of the above, the Group's gross profit for the year amounted to US\$11,705,000 compared with US\$13,834,000 for 2008. A detailed breakdown of this is set out in note 4 to the consolidated accounts on pages 44 and 46. The results of the Group's palm-oil and cattle activities are reviewed in more detail in the reports on pages 12 and 17.

BEARER BIOLOGICAL-ASSET ADJUSTMENT

The palm-oil price persisted at historically-high levels during 2009 leading to an increase of US\$16, to US\$502, in the long-term average price used to evaluate the Group's biological assets. Whilst the gain arising from this increase was to some extent offset by increases in the costs of maintaining and harvesting the Group's palms, it nevertheless accounted for more than half the biological gain in the year of U5\$23,518,000 (2008 U5\$24,226,000). The remaining biological gain was mainly due to the recognition of plantings which took place on the Group's new projects, but also on 391 hectares of replanting on its established estates. The same factors that affected the Group's own estates also resulted in an increase of U5\$2,692,000 in the Group's shares of the associated companies' profits for the year.

As referred to in the 2009 interim report, the Group took the strategic decision during 2009 to sell land which had already been developed to the co-operative schemes attached to the Kalimantan and Bangka projects. This decision is reviewed in more detail in the section entitled "New projects" on page 14.

Indonesian regulations govern the price at which land can be sold to co-operatives and in some cases this is below the cost, including a share of administrative overheads, which has been incurred by the Group. In respect of the bectares which have been treated in this way in 2009, the amount by which the costs incurred to date exceed the selling price was US\$637,000. However, there are also areas on which the selling price may well be above cost but recognition of this will not be taken until exact terms have been agreed and the land handed over.

At the point that bank finance is provided to the co-operatives, the amounts due fin the meantime treated as debtors by the Group) in respect of the land sold or to be sold to the co-operatives (US\$8,772,000 at 31 December 2009) will be repaid to the Group.

OTHER ADMINISTRATIVE EXPENSES

Administrative expenses were higher in 2009, compared with the previous year. This arose primarily

M. P. EVANS GROUP ANNUAL REPORT 2009

REVIEW OF THE 2009 RESULTS continued

from an increase in the provision for National Insurance on the future exercise of share options. The provision is based on the Company's share price at the halance-sheet date which was 309,50p at 31 December 2009 compared with 198,50p at the end of 2008. Also, the Indonesian head-office team is increasing in size to deal with the maturing new projects and the milling facilities which are presently under construction.

ASSOCIATED COMPANIES

The Group's share of its associated companies" profits/llosses) for the year, including the share of biological bearer-asset adjustments, compared with last year were as follows:

INDONESIA

As with the majority-owned estates, the Indonesian associated companies, PT Agro Muko and PT Kerasaan Indonesia, achieved higher f.f.b. crops but suffered from the lower average palm-oil prices. PT Agro Muko's rubber operations, as expected, were less profitable than last year as an extensive replanting programme is being undertaken, resulting in significantly lower crops. As with palm oil, rubber prices fell during the year. As a result of the above, the Group's share of the post-tax (pre-biologicalbearer-asset adjustments) results of these two associated companies was some 23% lower in 2009 than 2008. The valuation of biological assets increased sharply, particularly in PT Agro Muko, as the 20-year average palm-oil price increased and significant new areas were planted replacing old, low-value oil-palm and rubber areas. This was partially offset by the increased operating cost base. The Group's share of the posttax, post-biological-bearer-asset-adjustment profit amounted to US\$10,083,000, a 2% increase over 2008's US\$9,866,000.

Since the year end, the Group has purchased for cash (US\$7.31 million), another 5.31% in PT Agro Muko, bringing the shareholding to 36.84%. Two of the shareholders, International Finance Corporation and Deutsche Investitions-Und Entwicklungsgesellschaft mbh, who between them owned 14.42%, sold their shares pro rata to the remaining three shareholders, the SA SIPEF NV Group, PT Austindo Nusantara

Jaya and the Group. As a result of this transaction, PT Agro Muko is now owned as to 47.29% by the SA SIPEF NV Group, 15.87% by PT Austindo Nusantara Jaya and 36.84% by the Group. More details of the transaction are set out in note 35, "Post-balance-sheet events", on page 66.

Arising from the above-mentioned transaction, it was decided that PT Agro Muko would suspend dividend payments during 2009 but would re-start such payments after the transaction had been completed in 2010. Accordingly, the Group received a dividend of US\$4.42 million (gross) in April 2010 on its 36.84% holding. The Group's 31.53% share of dividends from PT Agro Muko in 2008 was US\$5.68 million (gross). The Group's share of PT Kerasaan Indonesia's dividends in 2009 amounted to US\$1.31 million (gross), compared with US\$1.52 million (gross) in 2008.

AUSTRALIA

NAPCo incurred a loss in 2010 which was largely attributable to the significantly-reduced number of cattle sold at below-average prices and weights. These factors, in turn, stemmed from the effects of the poor season suffered in 2008.

Prospects for 2010, however, are substantially more encouraging. As on Woodlands, all the NAPCo properties have in recent months benefited from excellent rainfall and consequent good pasture growth. This should help both towards an improvement in the results for 2010 and towards the rebuilding of the herd after it had to be downsized in 2008. The Group's share of NAPCo's dividends for 2009 amounted to US\$542,000, compared with US\$604,000 in 2008. Dividends are likely to remain at relatively low levels in the short term as revenue is directed towards the capital improvements described under "Associated company – NAPCo" on page 18.

MALAYSIA

Unlike the last few years, Bertam Properties did not sell any pieces of land in 2009, although a number of likely sales are now in the pipeline. Property development continued successfully during the year although profits were down on 2008. The Group's share of Bertam Properties' dividends in 2009 amounted to US\$5.11 million, compared with US\$10.41 million in 2008.

The results and operations of the Indonesian, Australian and Malaysian associated companies are reviewed in more detail in the reports on pages 12 to 25.

DISCONTINUED OPERATIONS

The Thai rubber-manufacturing operations were sold during 2009 for RM7.85 million (approximately US\$2.20 million), realising a gain of US\$1.56 million.

PROFIT FOR THE YEAR

As a result of all of the above, the Group profit for the year amounted to US\$20,710,000, compared with US\$53,596,000 in 2008.

The Group's plantation profit for the year ... may be regarded as more than satisfactory"

Appendix G(4) Extract of SA SIPEF NV 2009 Annual Report (listed on Euronext Brussels)

8	Annual report 2009 - SIPEF					
	2.2. Comments on the consolidated annual accounts	2.3. Key events after the financial year's closing				
	The consolidated accounts for the financial year 2009 of SA SIPEE MV were prepared in accordance with International Financial Reporting Standards (FRS).	As announced by press releases, the insurance subsidiary dives from their life insurance activities in a transaction with the Belg insurance company The Patronale, and BDM IV sold on 9 Feb				
	The consolidated total assets as at 31 December 2009 are KUSD 423,739, an increase of 13.5% compared to the total assets of KUSD 373,230 at the end of 2008. The main reason for this increase is the additional investment in biological assets and	ruary its Dutch car insurance subsidiary Bruns ten Brink BV to the SAA Group. The cash from these transactions is likely to be reinvested in their core business activities in cargo and industrial risk insurance.				
	installations, financed by cash flow generated during the book	2.4. Research and development				
	year. The balance of the remaining free cash flow was used for repayment of short term financial obligations. The net financial debt.situation of KUSD 14,454 at the end of 2008 further strength-	SA SPEF NV and her consolidated participations have not been active in any research and development operations in 2009.				
	ened the net cash situation to reach KUSD 36,108 as per end of	2.5. Financial instruments				
	2009.	Within the SIPEF Group, financial instruments are used in a restric-				
	The consolidated shareholders' equity of the SPEF Group, share of the Group before appropriation of profit, increased to KUSD 296,918, corresponding to USD 33,17 per share.	ted way for risk management. More specifically, this involves financial instruments that would mitigate the effect of an increase in interest rates on financial debt.				
	Despite the substantially lower market selling prices for our main products palm oil and rubber, is the combination of better volu- mes produced at lower cost, supported by favourable exchange	The counterparties of these financial instruments are exclusively renowned Belgian banks with which SA SIPEF M/has built up a long-term relationship.				
	rates and lower taxes, resulting in a profit from continuing operations before IAS41 of KUSD 58,579, exceeding last year's	2.6. Prospects for 2010				
	figure by 16.9%.	Palm plantations in North Sumatra are generally in a downward				
	The IAS41 adjustment consists of substituting the depreciation charge in the cost of sales with the variation in the fair value of the biological assets between end 2008 and end of December 2009, less planting costs and associated deferred tax charge. The gross variation biological asset gain of KUSD 19,209 arises mainly from the expansion of our oil paim areas in <i>PT UMW</i> in Indonesia and in <i>Hargy Oil Palms Ltd</i> in Papua New Guinea and increases in the long term averages of paim oil, rubber and tea prices. Planting costs at KUSD 13,208 reduced the net impact before taxes to KUSD 8,763, basis for an average deferred tax calculation rate of 31.6%. The net positive share of the Group IAS41 impact amounts to KUSD 5,530.	trend with limited bunches on the trees, whereas the Agro Muko production in the Bengkulu Province is in line with expectations. The paim plantations in Papua New Guinea are suffering from a very intensive wet season with more than 2,000 mm of rain since the beginning of the year, resulting in disrupted harvesting and transport of fruit from own plantations and outgrowers. It is therefore expected that the first quarter of 2010 will end for the Group with slightly lower palm oil productions, to be recovered thereafter. Rubber and banana production to date is exceeding last year's corresponding volumes, tea crops are normal.				
	The net IFRS result, share of the Group, including the IAS41 adjustments, amounts to KUSD 60,174 and is 2.4% above last					

year's record high performance.

8. Segment information

Segment reporting is based on two segment reporting formats. The primary reporting format represents business segments – pain products, rubber, tes, tropical fruits & plants and insurance – which represent the management structure of the Group.

The secondary reporting format represents the geographical locations where the Group is active. Gross profit per geographical market shows revenue minus cost of sales based on the location where the enterprise's products are produced.

Segment result is revenue minus expense that is directly attributable to the segment and the relevant portion of income and expense that can be allocated on a reasonable basis to the segment.

The result of the companies consolidated using the equity method is immediately detailed insurance/Europe and pain products/lvory Coast in the income statement.

Total	279,402	-187,174	92,228	2,122	94,350	100.00

After the termination of tropical finits activities in September 2008, the segment "tropical finit and plants" now only encompasses bananas and plants. The segment "corporate" comprises the management fees received from non-group entities.

Under IFRS (IAS41) depreciation on biological assets is not allowed.

Operational Review

ORCHARD OPERATIONS RETURN TO PROFIT

Orchard division earnings of \$3.72m is a \$6m improvement on 2008's loss of \$2.23m. The division delivered an excellent quality crop with high yields, lower reject rates and, through post harvest, achieved excellent storage incentives. Operational improvements were boosted through higher fruit returns, primarily due to a lower New Zealand dollar.

The New Zealand dollar fell dramatically in 2008 against key trading currencies. Zespri's FOBS payments increased \$0.68 to \$6.98 in green, \$1.12 to \$9.27 in green organic and \$0.89 to \$9.70 in gold. The resulting average orchard gate returns per hectare of \$35,085 green, \$44,390 organic and \$60,696 gold, enabled the orchard division to return to profit.

Long term leased orchards delivered full production in harvest 2008. The 105 hectares produced 809k trays of gold and 306k trays of green, and delivered positive cash flow of \$1.90m and EBITDA of \$2.27m. The outlook for long term leased orchards remains positive, noting the volume of gold fruit produced by these orchards.

The Company continues to restructure its risk profile from orcharding. The Total Value Lease rebalances the orcharding risk and reward structure with orchard owners. During the year, 60 leases, representing approximately a third of Seeka's leasing business, were transitioned, with uneconomic or underperforming orchards not considered for renewal. The uptake of the Total Value Lease has been positive. In nearly all circumstances the orcharding team delivered orchard owners a premium greater than the cost of Seeka's professional management services. Accordingly, the Company continues to experience good demand from orchard owners for new leasing opportunities.

The improvement in orchard earnings and return to profit is pleasing. The focus remains on maintaining excellent standards, and transitioning to the Total Value Lease.

(6) Extract of Seeka Kiwifruit Industries Limited 2009 Annual Report (listed in New Zealand Stock Exchange)

POST HARVEST

INNOVATION LEADS TO IMPROVED MARGINS & RETURNS

Seeka's total kiwifruit trays handled was 21.0m [class 1 and 2], down a marginal 0.2m trays on the prior year. In addition, post harvest handled 173k trays of avocados, down from 455k trays in the prior season, largely due to biennial fruiting of the local avocado crop.

While post harvest delivered lower earnings than the previous year, it returned to a normal earnings level. A better job, first time, and improved inventory which required less rework, lowered earnings but delivered superior orchard returns. Fruit loss improved to better than industry average in every variety, a significant achievement given Seeka's market share. This in turn delivered good storage returns to orchard owners, including Seeka's own orchard operations.

Seeka, through its supply operation IFSL, improved its delivery of fruit in-grade and ontime to Zespri. Accordingly Seeka and its supplying orchardists earned significant short order premiums by assisting Zespri to fill vessels.

The hub structure implemented in post harvest improved inventory management and delivered better results. The Company assigned orchards to hubs and aligned packing and coolstore capacity using forecast volumes and load out patterns. Additional coolstorage was constructed at Katikati in order to better handle gold fruit.

The new role of inventory manager coordinates hub operations from orchard to load-out, with key measures in place for all staff including load-out performance. The new structure effectively models operations at the Peninsula packhouse where the Company consistently achieves best practice. Balanced capacities and aligned management structures delivered better results.

Seeka has deployed its advanced inventory management system (AIM[®]). The system provided inventory managers with the necessary information to manage fruit in store and prioritise load out, which contributed to lower fruit loss.

Harvest processes continue to be improved. A new quality control process was implemented across all picking operations. A penalty system charges contractors picking out of grade with the proceeds going to orchardists. The process was initiated to improve crop quality and reduce physical damage of product arriving at the packhouse.

GROUP FINANCIAL REVIEW

Transformation Momentum

In the six months since announcing a major transformation program. Foster's has out in place a new strategy; a new company structure; and is embedding a new culture across the business.

Organisational renewal is accelerating with new operational leadership in the Americas, Australasian wine and Carlton & United Breweries (CUB).

This year's result includes \$21 million of efficiency benefits and Foster's remains on-track to deliver \$100 million of benefits in 2011.

Business Highlights

In a challenging global economy, the 2009 result stands as a reminder of the continuing strength of Foster's.

The Australian beer, cider and spirits business, now known as CUB, returned an expelient result.

Australian beer volumes were up in a good domestic market and Foster's continue to leverage a leading innovation program for strong earnings growth.

Wine Review related initiatives are on track and there is an extraordinary amount of activity underway. However the wine category is bearing the full brunt of a lack of consumer confidence brought on by global economic conditions.

Wine returns are not where Foster's wants them to be, but wine remains a profitable business, producing exceptional quality wines and continues to generate solid cash flows.

Overall, Foster's brands are in very good shape, holding their own in a tough consumer environment.

Foster's took write downs in 2009 of \$397.6 million associated with the Transformation Program, well within the range forecast in February.

Foster's balance sheet is strong, with conservative gearing, good cash reserves. and substantial committed undrawn bank facilities.

Foster's business strength, change momentum and strong brand health provide confidence that the business is in good shape now, and that better is to come.

Financial Highlights

Foster's reported a 4.0% increase in net profit' to \$741.5 million, with earnings per share? up 4.6% to 38.5 cents.

Cash flow was robust and benefited from tighter management of working capital. Cash conversion increased 8.7 percentage points to 101.9%? of EBITDAS? and rash fow after dividends was \$308.9 million.3

Net sales revenue increased 2.7% and EBITS' was up 2.3%. On a constant currency basis net sales revenue declined 1.6%, EBITS declined 2.7% and earnings per share increased 2.4%.

Benorted net profit increased to \$438.3 million and included significant items totaling \$397.6 million (\$287.2 million after tax) identified in February 2009.

Beer, Cider and Spirits (BCS) in Australia. Asia and Pacific (AAP) continued to perform strongly. On an underlying basis⁶ AAP beer net sales revenue increased 5.3% and AAP BCS EBITS increased 4.8%. AAP BCS EBITS was negatively impacted by currency. On a constant currency basis underlying EBITS increased 9.6% and 14.5% in the second half. In Australia, beer volume benefited from category growth and the continuation of a strong innovation program.

Foster's beer portfolio in Australia includes 7 of the top 10 brands, 3 of the 5 fastest prowing beens and in value terms 3 of the 5 largest new products released in the past. 12 months.⁶

Global wine EBITS declined 7.3% to \$363.9 million with a favourable exchange. rate benefit offset by deteriorating economic conditions, \$34.6 million of one-time items and higher costs of sales. Recessionary economic conditions in Americas, EMEA, Asia and the Pacific have significantly impacted consumer purchasing patterns and customers' inventory management practices. The one-time items reported in wine EBITS consist of a \$16.9 million impact from the transition to direct. distribution in key Nordic markets and a \$17.7 million adjustment relating to prior period distributor rebates in Americas.

Global wipe volume declined 5.3%. The key factors negatively impacting fiscal 2009 volume were the exit from the cask category in Australia; 1.1 million cases of customer inventory reductions, more pronounced in premium and luxury wines; a 0.6 million case reduction in shipments relating to the transition to direct distribution in key Nordic markets and a 0.4 million reduction in shipments relating to increased in-market bottling in the UK.

Higher margin on-premise consumption and sales of luxury, icon and some premium wines have declined, while outside of Australia lower margin commercial wines are experiencing strong growth, with an increasing impact through the second half.

Foster's retains a robust financial position with significant available liquidity. Interest cover was 7.9 times and at 30 June 2009 Foster's had cash balances of \$133 million and \$1.6 billion of committed undrawn bank facilities.

Net debt increased \$208.7 million as cash flow from operations after clividends of \$308.9 million were primarily offset by payments associated with the business Transformation Agenda and a \$404.1 million non-cash impact from exchange rate. movements since June 2006, Reflecting the increase in net debt, gearing increased to 69.5%.

Transformation Agenda

Foster's has built substantial momentum in the implementation of the business Transformation Agenda. This program is built on outcomes of the wine strategic review announced in February 2009. with implementation new well advanced. The renewal of the operational leadership team, revision of management structures and structural separation of beer and wine in Australia is now complete. Implementation of efficiency programs is in-line with expectations with initial benefits being realised in overhead reductions.

Foster's remains on-track to deliver \$100 million of efficiency benefits in the 2011 financial year with approximately \$21 million of benefits included in 2009 earnings. As at 30 June 2009, a net 301 roles have been eliminated as a result of the implementation of efficiency initiatives.
