Reliability

ASAF December 2013

*Andrew Lennard
on behalf of the five partners*

Reliability Background

Before 2010

- Reliability one of four principal QCs. Included:
 - Freedom from error and bias, faithful representation, substance over form, neutrality, prudence, completeness.
- Acknowledged need to balance QCs (¶45)
 - “the relative importance of QCs in different cases is a matter of professional judgement”

As revised in 2010

- Faithful representation, includes:
 - completeness, neutrality, freedom from error
 - verifiability an ‘enhancing’ characteristic

Relevance and faithful representation

Framework ¶QC16

- can be a faithful representation if appropriate process used, estimate described, uncertainties disclosed
- ...best information may be subject to large uncertainty

Framework ¶QC18

- Identify most relevant information
- Can it be faithfully represented? (Perhaps through disclosure?)
- If not, consider next most relevant information

Thus most relevant information is to be used even if 'faithful representation' is low

Reliability

Faithful representation

- A representation of an estimate can be faithful, if disclosures are adequate
- An inappropriate measurement basis may be 'representationally faithful', but may lack relevance

(CF 2010, ¶QC15, QC16)

Reliability

View 1—Nothing has been lost

- It was just a clarification
- There is no trade-off
- Reliability can be obtained by disclosure

View 2– An important step has been lost

- There was a change (not just clarification)
- There was a trade-off
- More focus on reliability is needed
- Reliability is not just a matter of disclosure

Reliability

Tentative view

- There was a change and now reliability is a matter of disclosure
- Reliability is at least as important as relevance and disclosure cannot always compensate
- Reliability should be reinstated as a fundamental characteristic

Reliability

Discussion Paper

*“Because the existing Conceptual Framework
no longer defines reliability,
the recognition criteria cannot retain that term”*

Discussion Paper Proposals

- Assets and liabilities recognised unless:
 - not relevant; or
 - no measure is representationally faithful, irrespective of disclosure
- Possible guidance on relevance, including
 - wide range of possible outcomes
 - low probability of inflow or outflow

Questions to consider

- Should the Framework note the need to balance relevance and reliability?
- Should the most relevant measure that can be faithfully represented be used?
- Are there any measures that cannot be faithfully represented (with disclosure)?
- Is reliability relevant to parts of the Framework other than recognition?
