Proposed IFRS[®] Taxonomy Update

IFRS Taxonomy 2017—*Annual improvements*

Comments to be received by 29 January 2018

Proposed IFRS Taxonomy Update Taxonomy/2017/3 *Annual Improvements* is published by the IFRS Foundation (Foundation) for comment only. The proposals may be modified in the light of the comments received before being issued in final form. Comments need to be received by **29 January 2018** and should be submitted in writing to the address below, by email to commentletters@ifrs.org or electronically using our 'Open for comment' page at: <http://go.ifrs.org/open-for-comment>.

All comments will be on the public record and posted on our website at www.ifrs.org unless the respondent requests confidentiality. Such requests will not normally be granted unless supported by good reason, for example, commercial confidence. Please see our website for details on this and how we use your personal data.

Overview of the proposed amendments to the IFRS® Taxonomy

Introduction

- 1 This Proposed IFRS Taxonomy Update includes proposed annual improvements to the IFRS Taxonomy 2017. Annual Improvements are changes to the IFRS Taxonomy other than those resulting from changes to IFRS Standards and analysis of common reporting practice. Annual improvements may include improvements to the data model to support consistent tagging and improvements to better reflect presentation and disclosure requirements in existing IFRS Standards. In accordance with the IFRS Taxonomy due process¹, these proposed improvements have been reviewed by the IFRS Taxonomy Review Panel.²
- 2 This document uses Taxonomy-specific terminology. For more information, please refer to the *Guide to Understanding the IFRS® Taxonomy Update* available on www.ifrs.org. The Appendix provides a brief explanation of terms used in this document.
- 3 The following table summarises the proposed changes. The next sections of this document describe the details of each change.³

Improvement	Overview of proposed changes to the IFRS Taxonomy
<p>Enhanced data model for reporting relating to continuing and discontinued operations. These changes are intended to support consistent tagging.</p>	<p>Change of the default member for the ‘Continuing and discontinued operations’ axis from ‘Aggregate continuing and discontinued operations’ to ‘Continuing operations’ (paragraphs 20–26)</p> <p>Change to the data model for the analysis of the single amount of discontinued operations—use of a table instead of line items (paragraphs 27–34)</p> <p>Changes to specified labels to clarify intended meaning of elements (paragraph 35)</p>

Improvement	Overview of proposed changes to the IFRS Taxonomy
<p>Disclosures in IAS 19 <i>Employee Benefits</i>.</p> <p>These changes are intended to better reflect the disaggregation of the disclosures relating to defined benefit plans.</p>	<p>Changes to axes applicable to all tables related to disclosures in IAS 19, as follow:</p> <ul style="list-style-type: none"> • Addition of existing axes ‘Geographical areas’ and ‘Segments’ to existing tables (paragraphs 40–44) • Addition of new axes and new members (paragraphs 45–47) • Addition of a new member to an existing ‘Defined benefit plans’ axis (paragraphs 48–49)
<p>Initial application of IFRS 9 <i>Financial Instruments</i>.</p> <p>These changes are intended to better reflect the disclosure requirements in IFRS 7 and align the modelling of those disclosures with similar disclosures in IFRS 17.</p>	<p>Addition of two new tables to better reflect the disclosure requirements for financial assets and financial liabilities (paragraphs 56–59)</p> <p>Addition of two new line items and deprecation of existing line item related to qualitative disclosures (paragraphs 60–61)</p>
<p>Other proposed improvements</p>	<p>Addition of a new element to better reflect example in IFRS 3 <i>Business Combinations</i> (paragraphs 62–63)</p> <p>Changes to the IFRS Taxonomy presentation to help locate specific elements (paragraphs 64–65)</p>

IFRS Taxonomy editorial corrections

- 4 The proposed IFRS Taxonomy Files and supporting materials accompanying the publication of this Proposed IFRS Taxonomy Update document contain a number of editorial corrections.
- 5 Editorial corrections can include, for example:
- (a) a change to a label or reference of an existing element to correct an error;
 - (b) a change to a label or reference of an element to reflect an editorial correction to IFRS Standards;

- (c) a change to a label of an existing element to reflect an amendment to the definition of an accounting concept in IFRS Standards;
- (d) the addition of a missing text block (and/or abstract element) for a group of elements representing the content of an existing IFRS Taxonomy table;
- (e) a change to an existing presentation group to include existing element(s) that have been missed from this group in error.

6 In accordance with the IFRS Taxonomy due process, editorial corrections do not need to be approved, reviewed or exposed for public consultation. Consequently, they have not been included in this Proposed IFRS Taxonomy Update document and have not been reviewed by the IFRS Taxonomy Review Panel or the International Accounting Standards Board.

Documentation labels

7 The IFRS Taxonomy includes documentation labels (also called definitions) for elements in the IFRS Taxonomy. These documentation labels are designed to provide additional transparency and clarity to users of the IFRS Taxonomy.

8 The documentation labels have not been included in this document, but are available as a separate Microsoft Excel® spreadsheet. They are also available as an additional linkbase in the IFRS Taxonomy files.

XBRL properties

9 This document does not provide the full list of XBRL properties for the line items and members listed. If you require further information on the XBRL properties applied to an element or table, please see the IFRS Taxonomy files and associated documentation.

IFRS Taxonomy version

10 The IFRS Taxonomy files for this proposed update are based on the IFRS Taxonomy 2017, published in March 2017.

Next steps

11 Comments on this Proposed IFRS Taxonomy Update will be reviewed and any necessary amendments made. After review by the IFRS Taxonomy Review Panel, a final IFRS Taxonomy Update will be released.

Invitation to comment

Introduction

- 12 We invite comments on this Proposed Taxonomy Update, particularly on the questions set out below. Comments are most helpful if they:
- (a) address the questions as stated;
 - (b) indicate the specific IFRS Taxonomy item, table or group of items to which they relate;
 - (c) contain a clear rationale; and
 - (d) include any alternative we should consider, if applicable.
- 13 Comments on the IFRS Taxonomy as a whole are also welcome. However, IFRS Taxonomy amendments resulting from such comments may be included in a subsequent update.

Questions for respondents

Question 1—Enhanced data model for the disclosure of ‘Continuing and discontinued operations’
--

<p>Do you agree with the proposed enhancements?</p> <p>If not, please specify what changes you would propose and why.</p>

Question 2—Defined benefit plans

<p>Do the proposed changes to the IFRS Taxonomy adequately reflect the examples provided in paragraph 138 of IAS 19 <i>Employee Benefits</i>?</p> <p>Are the changes modelled using appropriate line items and tables?</p> <p>If not, please specify what changes you would propose and why.</p>
--

Question 3—Initial application of IFRS 9 <i>Financial Instruments</i>
--

<p>Do the proposed IFRS Taxonomy changes adequately reflect disclosure requirements in paragraphs 42I and 42J of IFRS 7 <i>Financial Instruments: Disclosures</i>?</p> <p>If not, please specify what changes you would propose and why.</p>
--

Question 4—Other improvements

<p>Do you agree with the other proposed changes to the IFRS Taxonomy as described in paragraphs 63 and 65 of this document?</p> <p>If not, please specify what changes you would propose and why.</p>

Deadline

- 14 All comments must be received on or before 29 January 2018.

How to comment

- 15 We would prefer to receive your comments electronically; however, comments can be submitted using any of the following methods:

Electronically Visit the 'Open for comment' page at:
<http://go.ifrs.org/open-for-comment>

Email Send comments to: commentletters@ifrs.org

Postal IFRS Foundation

London EC4M 6XH
United Kingdom

- 16 All comments will be on the public record and posted on our website unless confidentiality is requested. Such requests will not normally be granted unless supported by good reason, for example, commercial confidence. Please see our website for details on this and on how we use your personal data.

Enhanced data model for reporting relating to continuing and discontinued operations to support consistent tagging

Background

- 17 The IFRS Foundation received feedback suggesting that the existing IFRS Taxonomy data model for reporting continuing and discontinued operations could result in the creation of unnecessary extension elements or inconsistent tagging of financial statements prepared applying IFRS Standards.
- 18 Responding to this feedback, the IFRS Taxonomy Review Panel asked the staff to review the current taxonomy model for the reporting of continuing and discontinued operations. As a result of this review we are proposing improvements to the IFRS Taxonomy.

Overview of proposals

- 19 This document proposes the following amendments to the IFRS Taxonomy:
- (a) change of the default member for the ‘Continuing and discontinued operations’ axis from ‘Aggregate continuing and discontinued operations’ to ‘Continuing operations’ (paragraphs 20–26);
 - (b) change to the data model for analysis of the single amount of discontinued operations—use of a table instead of line items (paragraphs 27–34); and
 - (c) changes to specified labels to clarify intended meaning of elements (paragraph 35).

Change of the default member to ‘Continuing operations’

- 20 Paragraph 82(ea) of IAS 1 *Presentation of Financial Statements* states that an entity shall include a line item that presents a single amount for the total of discontinued operations in the statement of profit or loss or the profit or loss section of the statement of comprehensive income.
- 21 Consequently, IFRS Taxonomy line items for amounts presented before the single amount for the total of discontinued operations have an implied meaning of being applicable to the amounts relating to continuing operations. For example:

The line item ...	can be used to tag ...
Revenue	‘revenue applicable to continuing operations’
Profit (loss) before tax	‘profit (loss) before tax applicable to continuing operations’
Profit (loss) from continuing operations	‘profit (loss) applicable to continuing operations’
Profit (loss) from discontinued operations	‘profit (loss) applicable to discontinued operations’

continued...

...continued

The line item ...	can be used to tag ...
Profit (loss)	'profit (loss) applicable to the aggregate of continuing and discontinued operations'

22 The IFRS Taxonomy also has a 'Continuing and discontinued operations' axis. The default member of this axis is defined as the 'Aggregate of continuing and discontinued operations' with the other (non-default) members of this axis: 'Continuing operations' and 'Discontinued operations'.

23 This axis is not included in any existing tables. However, an entity can apply this axis and its members to any line item when extending the IFRS Taxonomy.

24 Application of the axis and its default member is not consistent with the implied accounting meaning of elements as described in paragraph 21. For example:

The line item ...	and use of the member ...	can be used to tag ...
Revenue	Default (or no use of member)	'revenue applicable to the aggregate of continuing and discontinued operations'
Revenue	'Continuing operations'	'revenue applicable to continuing operations'

25 As a result, the current IFRS Taxonomy model may result in inconsistent tagging which in turn reduces the benefits of structured electronic reports to users of financial statements.

26 Consequently, we are proposing to change the default member of the 'Continuing and discontinued operations' axis from the 'Aggregate continuing and discontinued operations' to the 'Continuing operations' member as follows:

Existing axis and members – new default^{4,5}

Element label	ER	Reference
<i>Continuing and discontinued operations (A)</i>	D	IFRS 5. Presentation and disclosure

continued...

⁴ In all tables in this document the existing IFRS Taxonomy elements are presented in italics to distinguish them from the proposed elements. This is especially useful when illustrating how the proposed elements will fit within the existing structure of the IFRS Taxonomy.

⁵ In all tables in this document 'ET' and 'ER' represent element type and reference type, respectively. For element type, 'M' and 'TB' represent monetary and text block, respectively. For reference type, 'D', 'E' and 'CP' represent disclosure, example and common practice, respectively. For element label, 'A', 'M' and 'DM' in brackets represent axis, default member and member, respectively.

...continued

Element label	ER	Reference
<i>Continuing operations (DM)</i>	D	IFRS 5. Presentation and disclosure
<i>Aggregate continuing and discontinued operations (M)</i>	D	IFRS 5. Presentation and disclosure
<i>Discontinued operations (M)</i>	D	IFRS 5. Presentation and disclosure

Change to the data model for analysis of the single amount of discontinued operations

- 27 Paragraph 33(b)(i) of IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations* requires an analysis of the single amount of discontinued operations into the ‘revenue, expenses and pre-tax profit or loss of discontinued operations’.
- 28 This disclosure requirement is reflected in the IFRS Taxonomy through the use of line items. The available line items are:
- (a) ‘Revenue, discontinued operations’;
 - (b) ‘Expenses, discontinued operations’; and
 - (c) ‘Profit (loss) before tax, discontinued operations’.
- 29 Our review of reporting practice has highlighted that entities commonly provide additional analysis of the single amount of discontinued operations compared to the analysis required by paragraph 33(b)(i) of IFRS 5. Consequently, using the existing data model, entities need to add a large number of extension elements. For example, an entity would need to add an extension line item to tag the amounts of ‘cost of sales applicable to discontinued operations’.
- 30 The use of a taxonomy table representing the reporting of the analysis of the single amount of discontinued operations avoids the need for a large number of extensions. This is because a taxonomy table allows the re-use of a wide range of existing taxonomy line items and the application of the ‘Discontinued operations’ member to reflect elements related to discontinued operations. For example, to tag the amounts of ‘cost of sales applicable to discontinued operations’:
- (a) when using line items, an entity would need to create an extension ‘Cost of sales, discontinued operations’.
 - (b) when using the taxonomy table, an entity can use the existing line item ‘Cost of sales’ with the existing member ‘Discontinued operations’.

- 31 Consequently, we are proposing to add a new table for the analysis of discontinued operations using existing line items and the existing ‘Continuing and discontinued operations’ axis as follows:

Table text block

Element label	ET	ER	Reference
Disclosure of analysis of single amount of discontinued operations	TB	D	IFRS 5.33(b)

Existing line items

Element label	ET	ER	Reference^(a)
<i>Profit (loss) before tax^(b)</i>	M	D	IFRS 5.33(b)(i)
<i>Revenue</i>	M	D	IFRS 5.33(b)(i)
<i>Tax expense (income) relating to profit (loss) from ordinary activities of discontinued operations</i>	M	D	IFRS 5.33(b)(ii)
<i>Gain (loss) recognised on measurement to fair value less costs to sell or on disposal of assets or disposal groups constituting discontinued operations</i>	M	D	IFRS 5.33(b)(iii)
<i>Tax expense relating to gain (loss) on discontinuance</i>	M	D	IFRS 5.33(b)(iv)

- (a) This column only shows the new references that have been added. For a full list of all references for these existing elements, please use the IFRS Taxonomy Files or the IFRS Taxonomy Illustrated.
- (b) The line items included in this new table are limited to those elements that directly reflect the disclosure requirements of paragraph 33(b) of IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*. All elements required by paragraph 33(b)(i)–(iv) already exist in the IFRS Taxonomy. An entity can add any existing taxonomy line item (or where needed an extension line item) to this table.

Existing axis and members

Element label	ER	Reference
<i>Continuing and discontinued operations (A)</i>	D	IFRS 5. Presentation and disclosure
<i>Continuing operations (DM)</i>	D	IFRS 5. Presentation and disclosure

continued...

...continued

Element label	ER	Reference
<i>Discontinued operations (M)</i>	D	IFRS 5. Presentation and disclosure

32 As a result of the proposed new table, the line items referred to in paragraph 28, are now redundant. Consequently, we are also proposing to deprecate those line items.

33 In addition, the staff noted that:

- (a) paragraph 33(a) of IFRS 5 and paragraph 82(e) of IAS 1 require an entity to disclose a single amount for post-tax profit or loss of discontinued operations. This disclosure is represented in the IFRS Taxonomy by the line item 'Profit (loss) from discontinued operations'.
- (b) paragraph 98(e) of IAS 1 requires an entity to disclose separately the amount of material income or expense from discontinued operations. This disclosure is represented in the IFRS Taxonomy by the line item 'Expense (income), discontinued operations'.

34 The staff believe these two disclosures represent the same amount, and that using two line items for this amount may be confusing. We therefore propose to deprecate the element 'Expense (income), discontinued operations' and add a reference to paragraph 98(e) of IAS 1 to the line item 'Profit (loss) from discontinued operations'.

Changes to specified labels

35 We are proposing to change the labels for some elements to clarify their intended meaning or to make them consistent with the proposal to make 'Continuing operations' the default member of the existing axis 'Continuing and discontinued operations'. The following table summarises the proposed changes.⁶

Element standard label	Documentation label change
Profit (loss) before tax	The profit (loss) from continuing operations before tax expense or income. [Refer: Profit (loss)]
Tax expense (income), continuing operations	The aggregate amount included in the determination of profit (loss) for the period in respect of current tax and deferred tax that relate to continuing operations . [Refer: Continuing operations [member] ; Current tax expense (income); Deferred tax expense (income)]

continued...

⁶ New text is underlined and deleted text is struck through.

...continued

Element standard label	Documentation label change
Profit (loss)	The total of income less expenses <u>from continuing and discontinued operations</u> , excluding the components of other comprehensive income. [Refer: Other comprehensive income]
Profit (loss), attributable to owners of parent	The profit (loss) <u>from continuing and discontinued operations</u> attributable to owners of the parent. [Refer: Profit (loss)]
Profit (loss), attributable to non-controlling interests	The profit (loss) <u>from continuing and discontinued operations</u> attributable to non-controlling interests. [Refer: Profit (loss), Non-controlling interests]

IAS 19 *Employee Benefits*—changes to better reflect disaggregation of disclosures relating to defined benefit plans

Overview

- 36 Paragraphs 135–152 of IAS 19 *Employee Benefits* describe the disclosure requirements related to defined benefit plans. These requirements have been represented in the following existing IFRS Taxonomy tables:
- (a) ‘Disclosure of defined benefit plans’ table;
 - (b) ‘Disclosure of net defined benefit liability (asset)’ table;
 - (c) ‘Disclosure of reimbursement rights’ table;
 - (d) ‘Disclosure of fair value of plan assets’ table; and
 - (e) ‘Disclosure of sensitivity analysis for actuarial assumptions’ table.
- 37 Paragraph 138 of IAS 19 states that an entity shall assess whether all or some of the disclosures should be disaggregated to distinguish plans or group of plans with materially different risks. This paragraph also provides examples of such disaggregation showing one or more of the following features:
- (a) different geographical locations;
 - (b) different characteristics such as flat salary pension plans, final salary pension plans or post-employment medical plans;
 - (c) different regulatory environments;
 - (d) different reportable segments; or
 - (e) different funding arrangements (eg wholly unfunded, wholly or partly funded).

38 The disaggregation examples in paragraph 138 of IAS 19 have not been fully reflected in the IFRS Taxonomy. Currently, the IFRS Taxonomy has only a 'Defined benefit plans' axis with the following members:

- (a) 'Foreign defined benefit plans';
- (b) 'Domestic defined benefit plans';
- (c) 'Multi-employer defined benefit plans';
- (d) 'State defined benefit plans'; and
- (e) 'Defined benefit plans that share risks between entities under common control'.

39 Consequently, we are proposing improvements to axes applicable to all tables related to disclosures in IAS 19 as follows:

- (a) to add existing axes 'Geographical areas' and 'Segments' to improve consistency in the IFRS Taxonomy (paragraphs 40–44);
- (b) to add new axes and new members to better reflect disclosure requirements (paragraphs 45–47); and
- (c) to add a new member to an existing 'Defined benefit plans' axis to ensure completeness of the IFRS Taxonomy (paragraphs 48–49).

Use of existing 'Geographical areas' axis

40 The 'Foreign defined benefit plans' member and the 'Domestic defined benefit plans' member referred to in paragraph 38 are included in the IFRS Taxonomy to represent an example of disaggregation of benefit plans by geographical location in paragraph 138(a) of IAS 19.

41 However, the IFRS Taxonomy has also an existing 'Geographical areas' axis. We think that use of this existing axis would support greater consistency in the tagging of geographical breakdowns.

42 Consequently, we are proposing to add the 'Geographical areas' axis to all tables referred to in paragraph 36 and deprecate the 'Foreign defined benefit plans' and 'Domestic defined benefit plans' members. To reflect the amended data model, we are also proposing to add references to paragraph 138(a) of IAS 19 to the following existing elements:

Additional references for existing elements

Element label	ER	Reference
<i>Geographical areas (A)</i>	E	IAS 19.138(a)
<i>Geographical areas (DM)</i>	E	IAS 19.138(a)

Use of existing 'Segments' axis

43 One of the examples of disaggregation of disclosures provided in paragraph 138 of IAS 19 is disaggregation based on different reporting segments. The IFRS

Taxonomy has an existing ‘Segments’ axis but this axis is currently not included in tables related to the disclosure of defined benefit plans.

- 44 Consequently, we propose adding the ‘Segments’ axis to all tables referred to in paragraph 36. To reflect the amended taxonomy model, we are also proposing to add references to paragraph 138(d) of IAS 19 for the following existing elements:

Additional references for existing elements

Element label	ER	Reference
<i>Segments (A)</i>	E	IAS 19.138(d)
<i>Segments (DM)</i>	E	IAS 19.138(d)
<i>Reportable segments (M)</i>	E	IAS 19.138(d)

New axes to better reflect disclosure requirements

- 45 The taxonomy data model currently does not have any elements to capture the examples provided in paragraph 138 of IAS 19 relating to different characteristics, different regulatory environments and different funding requirements of defined benefit plans.

- 46 We have also observed that it is common reporting practice for entities to provide aggregated disclosures for ‘all pension defined benefit plans’. This element is currently not available in the IFRS Taxonomy. Paragraph 138(b) of IAS 19 includes as examples flat salary pension plans and final salary pensions but does not include an example for the aggregate of all pension plans.

- 47 Consequently, we are proposing the following new axes and members for all tables referred to in paragraph 36:

Axis and members

Element label	ER	Reference
Characteristics of defined benefit plans (A)	E	IAS 19.138(b)
Characteristics of defined benefit plans (DM)	E	IAS 19.138(b)
Pension defined benefit plans (M)	CP	IAS 19.138(b)
Flat salary pension defined benefit plans (M)	E	IAS 19.138(b)
Final salary pension defined benefit plans (M)	E	IAS 19.138(b)
Post-employment medical defined benefit plans (M)	E	IAS 19.138(b)

Element label	ER	Reference
Regulatory environment (A)	E	IAS 19.138(c)
Regulatory environments (DM)	E	IAS 19.138(c)

Element label	ER	Reference
Funding arrangements of defined benefit plans (A)	E	IAS 19.138(e)
Funding arrangements of defined benefit plans (DM)	E	IAS 19.138(e)
Wholly unfunded defined benefit plans (M)	E	IAS 19.138(e)
Wholly or partly funded defined benefit plans (M)	E	IAS 19.138(e)

Adding a new member to the existing ‘Defined benefit plans’ axis

48 The ‘Defined benefit plans’ axis does not include a member for the tagging of aggregated disclosures for all defined benefit plans other than multi-employer, state plans and plans that share risks between entities under common control.

49 Consequently, we are proposing to add a new member as follows:

Axis and members

Element label	ER	Reference
<i>Defined benefit plans (A)</i>	D	IAS 19.138
<i>Defined benefit plans (DM)</i>	D	IAS 19.138
Defined benefit plans other than multi-employer plans, state plans and plans that share risks between entities under common control (M)	D	IAS 19.138

Initial application of IFRS 9 *Financial Instruments*—changes to better reflect disclosures in IFRS 7

Overview

50 Paragraph 42I of IFRS 7 *Financial Instruments: Disclosures* requires, in the reporting period that includes the date of initial application of IFRS 9, disclosure of the following information for each class of financial assets and financial liabilities as at the date of initial application:

- (a) the original measurement category and carrying amount determined in accordance with IAS 39 or in accordance with a previous version of IFRS 9 (if the entity's chosen approach to applying IFRS 9 involves more than one date of initial application for different requirements);
 - (b) the new measurement category and carrying amount determined in accordance with IFRS 9;
 - (c) the amount of any financial assets and financial liabilities in the statement of financial position that were previously designated as measured at fair value through profit or loss but are no longer so designated, distinguishing between those that IFRS 9 requires an entity to reclassify and those that an entity elects to reclassify at the date of initial application.
- 51 The IFRS Taxonomy includes line items to reflect the disclosure requirement in paragraph 42I(c) of IFRS 7. However, the IFRS Taxonomy does not currently include any elements to capture the disclosure requirements in paragraph 42I(a)–42I(b) of IFRS 7.
- 52 Similar disclosure requirements that currently exist in paragraphs C32 of IFRS 17 *Insurance Contracts* and paragraph 7.2.34 of *Prepayment Features with Negative Compensation* (Amendments to IFRS 9) were modelled in the proposed IFRS Taxonomy updates published in May 2017 and in October 2017. Consequently, we propose to model the requirements in IFRS 7 on a similar basis.
- 53 In addition, in the reporting period that includes the date of initial application of IFRS 9, paragraph 42J of IFRS 7 requires an entity to disclose qualitative information to enable users to understand:
- (a) how it applied the classification requirements in IFRS 9 to those financial assets whose classification has changed as a result of applying IFRS 9.
 - (b) the reasons for any designation or de-designation of financial assets or financial liabilities as measured at fair value through profit or loss at the date of initial application.
- 54 This disclosure is reflected in the IFRS Taxonomy by the text block line item, 'Explanation of initial application of IFRS 9'. However, a similar disclosure requirement in paragraph C33 of IFRS 17 is modelled as two text block line items to reflect two different descriptions of changes resulting from initial application of the Standard. Consequently, we propose to model requirements in IFRS 7 on a similar basis.
- 55 Consequently, we propose to:
- (a) add a new table reflecting disclosure requirements for financial assets at initial application of IFRS 9 (paragraph 56);
 - (b) add a new table reflecting disclosure requirements for financial liabilities at initial application of IFRS 9 (paragraph 58); and

- (c) add two new line items and deprecate an existing line item to reflect qualitative disclosures that explain changes at initial application of IFRS 9 (paragraph 60).

New table reflecting disclosure requirements for financial assets

- 56 As a consequence of the requirements described in paragraph 50, we propose to add a table with new and existing line items in the IFRS Taxonomy, as follows:

Table text block

Element label	ET	ER	Reference
Disclosure of financial assets at date of initial application of IFRS 9	TB	D	IFRS 7.42I

Line items

Element label	ET	ER	Reference
Financial assets, measurement category immediately before initial application of IFRS 9	T	D	IFRS 7.42I(a)
Financial assets, carrying amount immediately before initial application of IFRS 9	M	D	IFRS 7.42I(a)
Financial assets, measurement category immediately after initial application of IFRS 9	T	D	IFRS 7.42I(b)
Financial assets, carrying amount immediately after initial application of IFRS 9	M	D	IFRS 7.42I(b)
<i>Financial assets previously designated at fair value through profit or loss but no longer so designated, initial application of IFRS 9</i>	M	D	IFRS 7.42I(c)
<i>Financial assets previously designated at fair value through profit or loss reclassified due to requirements of IFRS 9, initial application of IFRS 9</i>	M	D	IFRS 7.42I(c)
<i>Financial assets previously designated at fair value through profit or loss reclassified voluntarily, initial application of IFRS 9</i>	M	D	IFRS 7.42I(c)

Axes and members

- 57 To provide information for each class of financial assets, the table uses the existing IFRS Taxonomy axis 'Classes of financial assets' and its members.

New table reflecting disclosure requirements for financial liabilities

58 As a consequence of the requirements described in paragraph 50, we propose adding a table with new and existing line items in the IFRS Taxonomy, as follows:

Table text block

Element label	ET	ER	Reference
Disclosure of financial liabilities at date of initial application of IFRS 9	TB	D	IFRS 7.42I

Line items

Element label	ET	ER	Reference
Financial liabilities, measurement category immediately before initial application of IFRS 9	T	D	IFRS 7.42I(a)
Financial liabilities, carrying amount immediately before initial application of IFRS 9	M	D	IFRS 7.42I(a)
Financial liabilities, measurement category immediately after initial application of IFRS 9	T	D	IFRS 7.42I(b)
Financial liabilities, carrying amount immediately after initial application of IFRS 9	M	D	IFRS 7.42I(b)
<i>Financial liabilities previously designated at fair value through profit or loss but no longer so designated, initial application of IFRS 9</i>	M	D	IFRS 7.42I(c)
<i>Financial liabilities previously designated at fair value through profit or loss reclassified due to requirements of IFRS 9, initial application of IFRS 9</i>	M	D	IFRS 7.42I(c)
<i>Financial liabilities previously designated at fair value through profit or loss reclassified voluntarily, initial application of IFRS 9</i>	M	D	IFRS 7.42I(c)

Axes and members

59 To provide information for each class of financial liabilities, the table uses the existing IFRS Taxonomy axis 'Classes of financial liabilities' and its members.

Improved modelling for qualitative disclosures

60 As a consequence of the requirements described in paragraph 53, we propose to add two new line items, as follows:

New line items

Element label	ET	ER	Reference
Information on how entity applied classification requirements in IFRS 9 to financial assets whose classification has changed as result of applying IFRS 9	T	D	IFRS 7.42J(a)
Description of reasons for designation or de-designation of financial assets or financial liabilities as measured at fair value through profit or loss at date of initial application of IFRS 9	T	D	IFRS 7.42J(b)

61 As a result of the proposed addition of the line items, we also propose to deprecate the existing text block line item 'Explanation of initial application of IFRS 9'.

Other proposed improvements

Additional element to better reflect the example in IFRS 3 *Business Combinations*

62 Illustrative example 72 accompanying IFRS 3 includes an example disclosure representing the 'Goodwill recognised as of acquisition date'. Currently, the IFRS Taxonomy does not include an element for this example disclosure.

63 Consequently, we are proposing to add a new element as follows:

Line items

Element label	ET	ER	Reference
Goodwill recognised as of acquisition date	M	E	IFRS 3.B64 IFRS 3.IE72

Changes to the IFRS Taxonomy presentation to help locate specific elements

- 64 We have received feedback that entities find it difficult to locate specific elements and this may result in the creation of unnecessary extensions.
- 65 We think that a change in the IFRS Taxonomy presentation for such elements may resolve this concern. Consequently, we are proposing the following changes:

Element standard label	Proposed change to the IFRS Taxonomy presentation
Interest income (expense)	<p>This element is currently included in the presentation group '[871100] Notes – Operating segments'. However, entities commonly report this element in the statement of comprehensive income or in the notes to that statement; hence they are less likely to search for this element in the presentation group 'Operating Segments'.</p> <p>We therefore propose to also include this element in the presentation group '[800200] Notes – Analysis of income and expense'. This presentation group includes elements that are often reported in the statement of comprehensive income but not necessarily required to be reported in that statement by the IFRS Standards.</p>
<p>Investments in associates accounted for using equity method</p> <p>Investments in joint ventures accounted for using equity method</p>	<p>These elements are currently presented under the abstract element ('heading') 'Miscellaneous non-current assets' in the presentation group '[800100] Notes – Subclassifications of assets, liabilities and equity' where they might be difficult to find.</p> <p>We propose to add a new heading 'Investments accounted for using the equity method' in the above presentation group and move these elements under this heading. In addition, we propose to add a presentation and calculation relationship to indicate that these elements add up to the element 'Investments accounted for using the equity method'.</p>

Appendix

IFRS® Taxonomy content terminology

CORE—IFRS Taxonomy elements	
<p>The IFRS Taxonomy has elements to capture disclosures in financial statements prepared applying IFRS Standards.</p> <p>These elements are described using:</p> <ul style="list-style-type: none"> • line items—represent the accounting concepts being reported. They can be either numerical or narrative, reflecting the figures and narrative reported, for example, Assets, Property, plant and equipment, Description of accounting policy for government grants. • axes and members—are information categories and components that accounting concepts can be broken down into or reported by, for example, Classes of property, plant and equipment. • IFRS Taxonomy axes and members are grouped with line items to create an IFRS Taxonomy table—these tables illustrate the logical combinations of line items and axes. 	<p>These IFRS Taxonomy elements have:</p> <ul style="list-style-type: none"> • element names and element identifiers—the computer tags used to uniquely identify and mark up the data; • element labels—human-readable names reflecting the accounting meaning of an element; • element types (ET)—used to describe the type of data values permitted, for example, text (T), text block (TB), monetary (M), decimal (DEC), percentage (P); and • element properties: <ul style="list-style-type: none"> • period—whether the element is expected to be reported for a period of time (a duration) or at a particular point in time (an instant); and • balance—used to describe whether the element is expected to generally be reported as a credit or a debit.

SUPPORTING—documentation and references for IFRS Taxonomy elements	
<p>The IFRS Taxonomy provides supporting content to help a user better understand the accounting meaning of an element.</p>	<p>This content includes:</p> <ul style="list-style-type: none"> • references used to link an element to the authoritative literature, for example, IFRS 15 <i>Revenue from Contracts with Customers</i>; • element reference types (ER) used to define the source for an element, for example, disclosure (D), example (E) and common practice (CP); and • documentation label used to provide a textual description of the accounting meaning of each element.
SUPPORTING—mathematical relationships between IFRS Taxonomy elements	
<p>The IFRS Taxonomy provides supporting content to help a user better understand how elements may mathematically relate to each other.</p>	<p>For example, this content includes:</p> <ul style="list-style-type: none"> • summation of elements to a total or subtotal; and • a formula to indicate that an element is a ratio of other taxonomy elements.
SUPPORTING—presentation of IFRS Taxonomy elements	
<p>The IFRS Taxonomy provides presentation views under which the line items, axes and members have been grouped to support the human-readable viewing and navigation of the IFRS Taxonomy.</p>	<p>The IFRS Taxonomy has specific presentation elements:</p> <ul style="list-style-type: none"> • headings; and • presentation groups. <p>These elements are not used when tagging financial statements. These headings and presentation groupings also have labels.</p>
